## Professional Summary

Senior Backend Engineer with 6+ years of experience designing, building, and operating production backend systems across logistics, fintech, digital education, e-commerce, and enterprise platforms. Experienced in scaling business-critical services, optimizing PostgreSQL workloads, designing reliable background workflows, and integrating external vendors, payment providers, and government services. Strong expertise in Node.js, NestJS, TypeScript, PostgreSQL, MongoDB, Redis, RabbitMQ and Docker.

## Experience

### Senior Backend Engineer, Obeikan Digital Solutions (ODS) - Madar Project

October 2024 - Present

*Madar, an ELM-ODS Saudi logistics aggregation platform connecting vendors with delivery fleets across multiple industries.*

- Own and evolve key backend capabilities across fleet and vendor integrations, shipment assignment, pricing, invoicing, SLA automation, reporting, and production operations for a platform that grew to **8,000-10,000 daily shipments**, **~2.5M total shipments**, and **~30 integrated fleets**.
- Redesigned the internal reminder and reassignment workflow from scanning daily shipments to processing only SLA-eligible orders, restoring reliable SLA follow-up as shipment volume scaled from hundreds to thousands of daily orders, significantly reducing Operations' manual intervention.
- Improved high-traffic PostgreSQL workloads through query redesign, indexing, join optimization, and purpose-built SQL, reducing shipment-list latency by more than **90%** on critical operational filters.
- Re-engineered large shipment exports as queued background workflows with streaming and chunked processing, increasing supported export capacity by **10×** while reducing memory pressure, request timeouts, and impact on interactive application traffic.
- Designed and advocated for a dedicated adapter service for a strategically important integration under a tight delivery deadline, isolating temporary partner-specific behavior from stable production services and reducing regression and future decommissioning risk.
- Became a key engineer for fleet onboarding and technical evaluation, working directly with Operations and external fleets to assess API readiness, customization effort, operational risks, and maintainability before and during integrations.
- Own production operations through deployments, incident investigation, monitoring, SQL/data corrections, and collaboration with Operations, helping maintain business-critical shipment and SLA workflows as the platform scales.

### Founding Backend Engineer | Freelance, DebtBox

August 2025 - Present

*Saudi fintech platform for digital debt management integrating government-backed identity, payment, and promissory-note workflows.*

- Designed and built the backend foundation of a Saudi fintech platform from technical feasibility through soft launch, contributing to product architecture, core business workflows, infrastructure, and production readiness.
- Designed a modular monolith architecture with replaceable provider adapters for payments, identity, messaging, and government integrations, enabling future provider changes without increasing MVP complexity.
- Engineered business-critical financial workflows, including pricing, debt lifecycle, payment processing, settlement, and trust-related operations, with a strong focus on correctness, idempotency, transactions, and data consistency.
- Integrated with **Nafath** for government-backed digital identity verification and collaborated on technical workflows around **Nafith** electronic promissory notes (Sanad), translating evolving regulatory requirements into implementable backend solutions.
- Designed and deployed the MVP infrastructure on **SSSC-Alibaba Cloud (KSA)** using Docker, PostgreSQL, Redis, Nginx, and automated TLS, while establishing the foundation for monitoring and future CI/CD adoption.
- Partnered directly with the CEO throughout product discovery, technical feasibility, provider selection, MVP definition, and delivery planning, helping transform an early-stage concept into a production-ready platform.

## Senior Software Engineer, ArabDT

January 2023 - October 2024

- Contributed to production digital products across **EdTech, e-commerce, realtime communication, and enterprise systems**, building production backend services with Node.js, NestJS, TypeScript, MongoDB, PostgreSQL, and Redis.
- Developed backend features for **Moddakir**, an online Quran learning platform, supporting teacher-student workflows, scheduling, notifications, audio/video communication, and business-specific learning processes.
- Built and maintained backend capabilities for **Babel Marts**, including order management, inventory, customer notifications, scheduled jobs, external integrations, and e-commerce business workflows.
- Delivered backend integrations and production enhancements across multiple client projects, supporting reliable production deployments and evolving business requirements.

## Software Engineer, ArabDT

November 2021 – January 2023

- Contributed to the development and optimization of a large-scale realtime learning platform, delivering backend features for video/audio communication and reducing reliance on third-party services.
- Designed and implemented backend business workflows while integrating multiple third-party services across customer projects.
- Modernized and optimized legacy backend modules, improving maintainability, performance, and code quality across large existing codebases.
- Participated in end-to-end delivery, including backend and frontend testing, production deployments, database updates, and cross-functional coordination with mobile and frontend teams.

## Freelance Full Stack Developer

August 2022 – December 2023

- Delivered custom web applications for clients across transportation and education domains, integrating third-party services, payment gateways, and subscription-based business workflows.
- Developed backend and frontend features for a ride-booking platform and a learning management system supporting multimedia content, assessments, parental management, and online payments.

## Full Stack Developer, RPAEgypt

July 2019 – July 2021

- Contributed to the development of hospitality management solutions for hotels and restaurants, participating in backend, frontend, database design, and application maintenance.
- Built and maintained business applications using .NET, Node.js, Angular, SQL Server, and MongoDB, contributing throughout the software development lifecycle from requirements gathering to production support.

## Technical Skills

---

**Languages:** TypeScript, JavaScript (ES6+), SQL, C#

**Backend:** Node.js, NestJS, Express.js, REST APIs

**Databases:** PostgreSQL, MongoDB, Redis, SQL Server

**Messaging & Background Processing:** RabbitMQ, BullMQ, Scheduled Jobs, Background Workers

**Architecture & Engineering:** Distributed workflows, Event-Driven Architecture, Modular Monoliths, Microservices, API Integrations, Performance Optimization

**Cloud & DevOps:** Docker, Docker Compose, Azure DevOps, AWS, SSSC AlibabaCloud, Kubernetes (AKS), Nginx, Linux

**Observability:** Grafana, Sentry, OpenTelemetry, Azure Monitor

**Tools:** Git, GitHub, GitLab, Bitbucket, Postman

## Education

---

**B.SC in Computer Science, Faculty of Electronic Engineering, Menoufia University 2017.**

**Languages:** Arabic: Native | English: Professional Working Proficiency
